

Key benefits

- Scalable innovation
- Higher-quality deliverables
- Enhanced efficiency and productivity
- Improved collaboration and stakeholder management
- Integrated and optimized workflows
- Accelerated project delivery
- Reduced time and resource needs
- Lowered costs and risks

Featured products

- ProjectWise®
- SYNCHRO™

Smart scheduling: Linking project management to your 3D BIM model.

Accurately geolocated digital twin in Google 3D.

Facility construction

**Smarter collaboration. Faster project delivery.
Better outcomes for large, complex facility construction projects.**

Large-scale construction facility projects are often managed by general contractors under design-build agreements. Many contractors face considerable challenges in aggregating, collaborating, and managing the design outputs in the construction phase. This leads to slow productivity, limited collaboration, and increased risks, including costly rework and project delays.

Bentley's Facility Construction Solution empowers general contractors to deliver large, complex facility projects smarter, faster, and more collaboratively with sub-contractors and the facility owner-operators. A solution that connects project stakeholders with trusted cloud BIM data across design and construction, streamlining BIM workflows and digital facility project delivery through model-centric workflows. Bentley's Facility Construction Solution enhances construction execution with real-time data capture, 4D planning, and full digital context, bridging field and office teams. This solution enables seamless cloud collaboration, informed decision-making, and accelerated facility project outcomes with higher quality and reduced costs and risk.

A facility construction solution that saves time, cuts costs, and maximizes resources.

- **Streamlined project execution:** Role-based access, federated login, and ISO-compliant workflows ensure secure, scalable collaboration across dispersed teams.
- **Visualized workflows:** Enabling teams to simulate construction sequencing, compare schedule scenarios, and optimize resource allocation before work begins.
- **Collaborative BIM data management:** Supporting interdisciplinary design reviews, automated BIM rule validation, and clash detection across large-scale facility projects without system limitations.
- **Scalable innovation:** Empowers organizations to innovate without disruption, adapting to evolving project demands and complexities.
