Bentley Adds *MANAGEServices* Offering for Construction Managers through Acquisition of *EADOC* Cloud Services

*Solution Uniquely Streamlines Construction Management
While Providing Visibility into Costs*

EXTON, Pa., U.S.A. – March 12, 2015 – Bentley Systems, Incorporated, the leading company dedicated to providing comprehensive software solutions for *sustaining infrastructure*, today announced that it has acquired the business of Oakland, Calif.-based EADOC, LLC, provider of construction management cloud services. This newest addition to Bentley's [MANAGEServices](#) offerings helps construction managers at engineering/construction management firms and infrastructure owner organizations with capital projects to easily reduce risk and staff hours, improve information quality, and provide owners with real-time visibility into costs. *EADOC* empowers facility owners to increase ROI through faster project completions, easily monitor project financial performance, and maintain detailed construction records without administrative staff.

EADOC enables construction management professionals to track construction project documentation including design clarifications, inspectors' daily reports, special inspections, memos, action items, deficiency items, and schedules. *EADOC* also uniquely integrates project cost controls, including budget, funding sources, contracts, schedule of values, pay estimates, change requests, and change orders, with this project information.

The solution, which is immediately accessible to the project team, provides fast access to documents and cost information from virtually anywhere. At the same time, it incorporates security features to make sure the right people have access to the right information.

Harry Vitelli, Bentley Systems senior vice president, construction and field, said, “We welcome the EADOC team, including founder Eric Law, to Bentley. Eric’s expertise will be invaluable as we advance [ProjectWise](#) for more comprehensive project delivery. In parallel, we will be extending *EADOC*’s information mobility, for instance, through Bentley mobile apps including [Navigator Mobile](#) and *ProjectWise Worksite*.”

Eric Law said, “As a former member of the Bentley Developer Network, our team is extremely pleased to now be part of Bentley. Together we can take information mobility across design and construction workflows, as well as into operations, to new levels for small and large organizations alike.”

EADOC, LLC was founded by Law in February of 2006. The idea for the *EADOC* construction management solution came from Law’s experience working for a large contractor on commercial and industrial projects as a project engineer. Users of *EADOC* include construction managers at:

- engineering/construction management firms – for example, Brown & Caldwell, Carollo Engineers, CH2M HILL, HDR, HNTB, Jacobs Engineering, MWH Constructors, and Arcadis;
- facility owners – for example, East Bay Municipal Utility District; City of Bend, Oregon; Lee County, Florida; Central Utah Water Conservancy District; and West Valley Mission Community College District.

The many benefits of the *EADOC* solution include improved:

- accessibility – keeping construction projects up to date with real-time information;
- accountability – providing faster return on investment;

- productivity – enabling time savings of up to 30 percent;
- efficiency – reducing costs;
- risk mitigation – tracking and controlling risk to mitigate cost and schedule impacts.

Commenting on *EADOC*, Ron Perkins, construction services manager, HDR, said, “The more I know of the risks coming up ahead of time, the more I can mitigate them. *EADOC* allows you to take the output from those risk registers, with probability and cost, and incorporate them into the cost module. You can identify the risk, identify the probability, identify the potential cost, and that allows you to track those costs – so that your client or the owner understands and knows what the risks are and the potential costs.”

Kenny Klittich, mechanical engineer, Brown & Caldwell, said, “I have worked with both ‘manually’ managed construction services, as well as competing project management software, and *EADOC* is the first to reduce my ‘paper-pushing’ time to zero. Internet-based access to construction tasks (RFIs, submittals), as well as the latest drawings and specs, saves me tremendous amounts of time tracking down these resources and verifying they are the latest version. *EADOC* is a great product.”

About Bentley Systems

Bentley Systems is the global leader dedicated to providing architects, engineers, geospatial professionals, constructors, and owner-operators with comprehensive software solutions for advancing the design, construction, and operations of infrastructure. Bentley users leverage information mobility across disciplines and throughout the infrastructure lifecycle to deliver better-performing projects and assets. Bentley solutions encompass *MicroStation* applications for *information modeling*, *ProjectWise* collaboration services to deliver *integrated projects*, and *AssetWise* operations services to achieve *intelligent*

infrastructure – complemented by worldwide professional services and comprehensive managed services.

Founded in 1984, Bentley has more than 3,000 colleagues in over 50 countries, more than \$600 million in annual revenues, and since 2006 has invested more than \$1 billion in research, development, and acquisitions.
